*EPA Registered Antimicrobial  
Finish. Low Toxicity, No-rinse  
Formula Suitable for Home  
and School Use.*

## 30-Day Antimicrobial Finish

Introducing the **BEST PROTECTION AND DEFENSE** against bacteria and microbes between routine disinfecting.

**ProtectX Pro** is highly effective at ensuring long-lasting surface protection. It is the covalent bond that attaches to the treated article that separates it from chemical disinfectants. It will not allow for bacteria to live so long as the bond is in place.

## What do you do between disinfecting?

Typical disinfectants kill bacteria and microbes within 10 minutes, but once the product dries, there's no further protection. The cleaned surface is now ready to be recontaminated. Imagine someone wiping and disinfecting a surface every time new microbes contaminate it. **ProtectX Pro** is effective up to 30 days with one simple monthly application!

### PROTECTIVE BARRIER

Protective barrier reduces cross contamination on high touch and at risk surfaces.

### PREVENTS MOLD & MILDEW

Bio-film cannot exist on a treated surface therefore, mold and mildew cannot thrive.

### REDUCES ATP SCORES

One single treatment potentially reduces the bacteria load of a facility nearly 83%.

### LOW TOXICITY

Microscopic "needles" puncture organisms using a physical kill not a chemical kill (no poison).

### LONG LASTING

Provides a protective surface that is not destroyed by normal daily cleaning. Depending on use or treated surface, application lasts from 30-90 days

Independent studies have shown **ProtectX Pro** to be effective against Salmonella, E-coli, Listeria, Noro Virus and a wide range of bacterial and viral contaminants.
